

Sonic Tracer System

Adding the Sonic Tracer System to your CopperHead® walk-behind Laser Screed® will allow you to utilize your CopperHead on a wider variety of pours. It enables you to pour slabs to a defined thickness rather than to an elevation defined by a laser beam.

The Sonic Tracer System is designed to automate the placing and screeding of concrete on cambered metal decks or on pre-cast concrete panels. It is also very effective in concrete paving applications.

The Sonic Tracer System utilizes the very same technology Somero has used to control elevation on the left side of our ride-on screeds in 3D mode. With the CopperHead we use the sonic tracers to control both sides. The system comes in kit form, and will plug right into your CopperHead using the special control cords that come with it.

Faster:

You can substantially increase the amount of concrete placed daily, enabling you to take advantage of fast-track production.

Flatter:

Following the subgrade closely can improve your yields.

Fewer:

You can offer owners cost effective paving projects that will provide years of quality service with lower maintenance costs.

Expand your laser screed utilization and increase your productivity and profitability.

Complete Sonic Tracer System Package Includes:

2 Sonic Tracers
2 Screed Rails
Cords
Brackets
Poles
Storage Case
