

Contractor Takes Business To A New Level With Cutting Edge Technology

Peter J. Minegar, President of Minegar Contracting knows a thing or two about concrete contracting. He has been a concrete contractor since 1977 in Temecula, California. In his first 17 years, he placed 20 million square feet of industrial and commercial slabs. Since purchasing Somero® equipment nine years ago, he has placed over 300 million square feet.

Somero Enterprises asked Minegar Contracting to try out a brand new Laser Screed® – the Somero SXP. He put the machine to the test and the results were amazing. Peter and his crew absolutely loved how the machine worked and looked. The SXP showed tremendous improvements in efficiency, accuracy and quality of placement.

“With the new rotating head feature of the Somero SXP, we found that we had a much longer reach - up to 25’. This is truly one of the best improvements made to the original Laser Screed.” Minegar states.

Benefits of the SXP are:

- Increased “F” numbers – up to 20%! Fix cold joints! Soft Landing and vibrator delay for smoother touch downs and more accurate passes.
- Improved Productivity – up to 25%! Faster cycle times, larger effective screed-head width, and advanced electronics.
- Save labor! Faster set-up, clean-up and maintenance. User friendly interface shortens training time.
- Versatility! Power Rotating head enables operator to skirt obstructions, operate along walls, and extend reach.
- Less operator fatigue! Better operator ergonomics, new seat, advanced controls.
- Ease of transportation! Improved balance with center of gravity in the lower chassis.

Tom Brackin, owner of Triple Star Construction and customer of Peter Minegar, had this to say about the new SXP. “The rotating head was super, we placed an entire 150,000 square foot retail shopping center full of pipes, chases and penetrations, we literally did not have to hand rod anything!!!”

Peter Minegar knows what it takes to be a leader in this industry. In fact, he purchased two Somero SXP Laser Screeds.
